Subject: Needle Assembly Spring for Vector and Vector Solo Guns

The spring used in the P/N 79853-XX and P/N 78628-XX Needle Shaft Assemblies for the Vector Solo and Vector Corded Guns has been updated. This new spring is stiffer than the previously used spring and allows for quicker and a more positive fluid shut-off when the applicator is not triggered. Any new needle shaft assemblies or applicator assemblies ordered from the ITW Ransburg manufacturing facility will be shipped with this new spring.

Please note that although the spring stiffness has changed, the part number will remain the same.
